WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

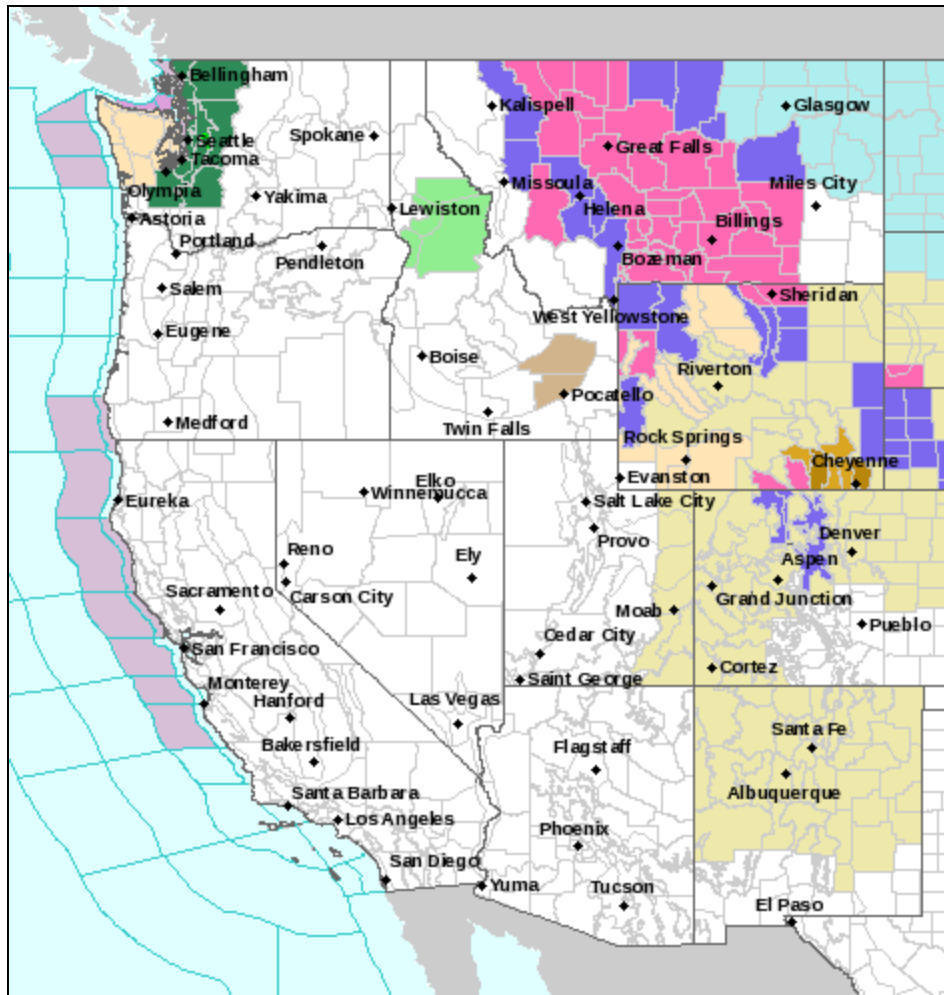

Ridge of high pressure will remain anchored off the West Coast, leading to unseasonably warm temperatures across interior Northern California. The upper ridge will continue to shunt all precipitation well north of the state with fair conditions and above normal highs persisting through the period. Temperatures on Sunday could approach record territory again. A weak shortwave energy moves into the Pacific NW and dives southward into the Great Basin Monday into Tuesday. Thus, most locations will see a little cooling on Monday compared to this weekend, but will still remain above climatology. Model guidance continues blocking pattern through the period, so very little day to day changes are forecast. Patchy morning fog could still be possible near river valleys.

SOUTHERN CALIFORNIA

Another sunny day today with above normal temperatures as the state's weather is dominated by a large east pacific and weak offshore flow at the surface. Maximum temperatures today will again be 10 to 15 degrees above normal. The weak anticyclonic flow turns weakly cyclonic tonight. Surface gradients will still be offshore but they will be about a MB weaker than right now. This will likely allow a shallow marine layer to form over the LA coast. So shallow, in fact, that it will likely be accompanied by some dense fog.
